ABSTRACT

Objective: The aim of present study was to evaluate the acute toxicity of Brahmivati in mice.

Material and Method: In this study the dose of 13 mg/ 20 g of Brahmivati was administered orally for 14 days.

Result: The oral administration of Brahmivati at the highest dose (10 times) of Therapeutic dose resulted in no mortality or evidence of adverse effects implying that Brahmivati is non toxic. Throughout 14 days of the treatment no hyperactivity, depression or abnormal behavior was seen. Also, there was no cyanosis, blanching or Inflammation of nasal tips, paws, eyes, ears, No abnormal secretion from mouth, eyes & nose was seen.

Conclusion: Overall, the results suggest that, the oral administration of Brahmivati did not produce any significant toxic effect in mice

Keywords: Brahmivati, Acute Toxicity, body weight, depression etc.
